

**Brisant-D
can stop him.**

BRISANT D

**The ultimate in locking security.
As standard.**

About your Brisant-D lock

Anti-Pick

Where normal 5 pin locking systems may feature 30,000 combinations the 6 anti-pick pin Brisant-D system boasts 150,000.

Snap Resistant

If an intruder tries to snap your Brisant-D lock he's left holding the sacrificial lock tip. The rest of the lock stays secure with its molybdenum core which is 25% denser than iron.

Anti-bump

If a 'bump key' is used to force entry into your home, Brisant-D has pins which are designed specifically to repel the attacker.

Self Cleaning

The perfectly contoured key-hole can wipe your key clean of any dirt, debris or pocket fluff which could cause the lock to jam.

Dual Colour

The experienced burglar recognises the dual colour signifies the cylinder has improved security features - a visible deterrent.
